Just released, this Security Bulletin and patch on the usage of Java objects in a security sandbox, a subject that has been fervently discussed on various lists and forums.

### ColdFusion MX Security Bulletin [MPSB04-01](#)

*"ColdFusion MX 6.1 sandbox security can be compromised by creating Java objects without using `CreateObject()` or `CFOBJECT` even if these features are disabled. The sandbox cannot be compromised externally, but programmers operating in a shared, hosted environment could be vulnerable."*
