ColdFusion 4.5/5/MX may evaluate "0a" or "12a" to be a time equating to 0 (12:00 AM) when you're not expecting it to do so. The following outputs "YES YES":

```
[CFIF "0" eq "0a"> YES [CFELSE> NO [/CFIF>
```

```
[CFIF "0" eq "12a"> YES [CFELSE> NO [/CFIF>
```
