[@remotesynth](#) Nice, I didn't even know Cringely was still writing columns since he parted with PBS. I used to read them every week.

Fri Jul 10 12:41 PM

[@chrisadragna](#) This is old news since Labs was first published under Macromedia. Wiki was a canned app, and a better one in CF didn't exist

@loulesko Thanks Lou!

Thu Jul 09 3:48 PM

@boyzoid Hey that comment really makes me angry!

Thu Jul 09 1:57 PM

@prebynski The context of the empty or lonely expansiveness is what makes that image work. Cropping would take that away.

Thu Jul 09 12:40 PM

I married Canon but lust for Nikon. This only makes matters worse...

@marcesher @ntunney In my teens I was a pretty good bowhunter in MD, but am pretty happy just watching now. Loved Green Ridge St Forest

Thu Jul 09 12:28 PM

Just added myself to the <http://wefollow.com> twitter directory under:

Thu Jul 09 12:22 PM

@shutupdanielle Since I moved from MD in the 90s, I dunno where to fish up here. Recommendations?

@photonconcepts Thanks, and yes I completed my website (built with Flash/Flex), soon to publish, but my new son and bronchitis wore me down

Thu Jul 09 11:42 AM

@tangon Glad you like the image. You should have gotten an email with link to full size print quality file.

Thu Jul 09 10:30 AM

@DanaLanePhoto Yeah, you're everywhere! Thanks for the complement. A fun

TFCD deal.

@notronwest That it is. I figured I'd let him announce it rather than broadcast his name/alias.

Wed Jul 08 11:58 PM

@awest Thanks! Much appreciated. To boot, that guy is a ColdFusion dev locally.

Wed Jul 08 4:04 PM

Hrm... Could it be that ColdFusion option to spool mail to memory also puts file attachments in memory?

Wed Jul 08 3:54 PM

@shutupdanielle So far so good. Reminds me to fix my generator. Remember the Dec ice storm? Had no power/heat for 7 days. Hello hotel!

Wed Jul 08 3:27 PM

@jamie_krug Thanks that link. Looks very handy. Turns out it was an NFS option for nolock that helped

Wed Jul 08 3:22 PM

Actually iptables wasn't causing my mount.nfs Input/output error. Had to read an Italian blog post to solve it: <http://bit.ly/DbjBJ>

Wed Jul 08 3:14 PM

Set up NFS file sharing between two client Linux boxes, but iptables firewall is enabled. Have to lookup the ports and add new rules.

Wed Jul 08 2:04 PM

Loud ass thunder outside with glowing neon blue flashes. Should I step away from the electronics at this point?

Wed Jul 08 1:39 PM

Adobe Connect really needs a way to rewind during the live meeting, then advance to catch up. Just like Tivo.

Wed Jul 08 1:00 PM

Love all the repetitious "can you hear me now" by the Adobe people on Connect.

Wed Jul 08 12:33 PM

@awest Yay for today, otherwise *sigh*. If only I were an Adobe Community Expert.

Wed Jul 08 12:31 PM

@mobarger They are recorded. Can't remember where URLs are posted, but **@jladams97** (Josh Adams) can direct you

@spider4 Nice! I really really wish I had more time to get involved with CIPNE, but for now I look forward to the events.

Wed Jul 08 11:56 AM

Out of nowhere, on a Windows laptop I rarely log into, I hear "pop", and see the warning "You have unused desktop icons". Windows: Shutup!

Wed Jul 08 10:40 AM

Wow, I must be spoiled by Connect. Have to use WebEx now and it sucks a big one

Wed Jul 08 10:26 AM

Google to release a Linux based operating system? Yes! Time to freshen my Linux certification

Wed Jul 08 9:25 AM

@fuzzyorange What if you purposely introduce an error, attempt to compile, then remove that error and compile again?

Wed Jul 08 9:06 AM

@fuzzyorange Was it the ever so friendly "Internal Build Error" without a line number to reference?

Tue Jul 07 9:43 PM

@Pogue Re filedropper, thought I'd store video files here to be played in my Flash site, but a) requires captcha, b) no crossdomain.xml

Thu Jul 02 9:50 PM

Prepare for an avalanche! RT **@ryanmaurodesign**: Does anyone have an opinion on Adobe Coldfusion?

Thu Jul 02 9:13 PM

@marcesher Thanks, Its a bit like a blood trail. Once I get a whiff I just keep hunting down the source.

Thu Jul 02 8:49 PM

The slow **#coldfusion** startup confirmed as bad linux hostname. DNS resolved to a dummy ip. CF waited for tcp retransmission timeout.

When I sit back in the couch with the perfect laptop positioning, it interferes with the baby monitor. Not looking forward to hunching over

Wed Jul 01 10:42 PM

Finally figured out that an incorrect DNS server at the OS level can cause **#ColdFusion** to take many minutes to start while DNS conn fails

Wed Jul 01 7:57 PM

@rossching Do you have a donate page? I'd happily co-fund your timelapses!

Wed Jul 01 7:55 PM

Kudos to **@EyeFiCard** for following up directly on Twitter about the Eye-Fi wireless camera adapter issue I tweeted earlier.

Wed Jul 01 7:53 PM

@EyeFiCard Thank you for the attention. The incident is 090615-XXXXXXX.

Wed Jul 01 5:38 PM

@awest You can choose to have the OS open dialog or the Photoshop open dialog. There's a toggle somewhere.

Wed Jul 01 5:37 PM

@Palila You must be doing something wrong, re: **#coldfusion** forced restarts q5min

Wed Jul 01 5:36 PM

@NortonFinds_IT Send your post to the manager of the Boston CFUG. He'll broadcast it. By UI you mean Flex? CF isn't really for UI.

Wed Jul 01 5:21 PM

@willfull Calling your sales rep is first step. Hold their feet to the fire. Customer Service is effectively useless these days.

Wed Jul 01 5:18 PM

@doleary2112 Steam crabs in a big pot using 1/2 vinegar 1/2 water, layering,

and covering with Old Bay. When they're red, they're done.

Wed Jul 01 4:53 PM

@willfull The CF Product Manager is responsible for setting licensing policy. Sales reps may exaggerate terms

Wed Jul 01 4:31 PM

@willfull What's (Where's!) the beef? I was at Adobe since Allaire, worked with CF for 9 years
