### Follow me on Twitter!

Fri Jul 17 1:15 AM

**@scouten** Fascinating! BTW, if u ever need LR3 beta testers, sign me up. (I won the Adobe contest for most bugs logged against PS Express)

Fri Jul 17 12:59 AM

**@ashumittal** Feeling a lot like Thursday night here! ;-)

Fri Jul 17 12:52 AM

**@scouten** Yikes! Didn't know that. A 4 year dev cycle must have been grueling (but finally rewarding)

Fri Jul 17 12:43 AM

**@scouten** Wasn't Lightroom 1 released Feb 2007? Macr/Adobe deal closed Dec 2005. Well, as Flex dev, my fingers are crossed for MXML in LR3

Fri Jul 17 12:37 AM

**@scouten** What got me thinking was PatchPanel which enables Flex developers to write plugins for CS4. Wishing could do that with Lightroom.

Fri Jul 17 12:33 AM

Passing the night by watching **@benforta** videos on ColdFusion 9 (again)  
<http://bit.ly/Qz4Yv>

Fri Jul 17 12:12 AM

**@styggit** Could be in the roadmap for Lightroom. PatchPanel for CS4 aids MXML plugin dev. Maybe 2b in LR3? <http://bit.ly/VhR4H>

Fri Jul 17 12:03 AM

**@styggit** Saw Configurator demoed at PSWorld. PSCS4 runs AS3/MXML plugins. Just thinking out loud about using Flex for Lightroom plugins

Thu Jul 16 11:51 PM

**@iotashan** No, I don't expect to write Lightroom plugins in CFML, or Java. Point is, why LUA? Just bc its an interpreted language?

Thu Jul 16 11:47 PM

So, should I learn LUA to write Lightroom plugins? And why LUA after all? ColdFusion Builder allows you to write CFML to extend it.

Thu Jul 16 11:10 PM

Wed Jul 15 12:48 PM

**@wbznewsradio** Early? Its 1pm

Wed Jul 15 12:34 PM

I'm thinking to invent a critter escape platform and ramp in the pool to avoid this <http://yfrog.com/7azmmj> <http://yfrog.com/7gihyj>

Wed Jul 15 11:41 AM

**@danzarrella** Big Brown Eyes, Old 97s

Wed Jul 15 10:53 AM

**@webRat** nevertheless

Wed Jul 15 10:50 AM

I love that I can log a ColdFusion bug now and have it reviewed in 24 hours. Flex by contrast seems to take months.

Wed Jul 15 9:37 AM

RT **@jforrest8**: With all the CF 9 news I blogged about Java 6 JVM tuning: <http://tinyurl.com/nt69oe>, hope it helps.

Tue Jul 14 8:56 PM

**@gregorywilson** At this moment I'm installing LCDS AIX build to Mac OSX on JRun to test my LCDS sample app with ColdFusion 9

Tue Jul 14 8:55 PM

Nova ScienceNow coming up in 5min. I <3 PBS

Tue Jul 14 7:37 PM

RT **@loulesko**: Young Photopreneur Radio: Episode 4 Founder of BlinkBid and Advertising Photography Lou Lesko <http://bit.ly/q4Zf9>

Tue Jul 14 5:29 PM

Have an expired Flash Builder 4? Enter your valid Flex Builder 3 Serial here for extension <http://bit.ly/15rRIS> (via **@esulliva** )

Tue Jul 14 5:04 PM

**@esulliva** Hey Ed, are there similar temp serials for Flash Builder 4 online, or should I call Cust Support? Thanx!

Tue Jul 14 4:48 PM

**@joaofernandes** Voted, and added supporting comments. Would "fetch" be better named as "get" for better Assembler code reuse?

Tue Jul 14 4:32 PM

**@joaofernandes** They're currently in Beta 2 dev cycle, so still possible. RC is too late.

Tue Jul 14 4:27 PM

**@joaofernandes** AIR Sync implmentation harder to read than when abstracted the way LCDS example makes use of the DAO: <http://bit.ly/43GWF1>

Tue Jul 14 4:20 PM

**@joaofernandes** Yes, I see that. Both LCDS and AIR receive the same data, but LCDS gets it all in one object, AIR does in 3 objects

Tue Jul 14 4:17 PM

**@joaofernandes** AIR sync requires operations, clientObjs, origObjs  
<http://bit.ly/olbql> ; I see LCDS is more compact: <http://bit.ly/bHO1S>

Tue Jul 14 4:00 PM

Working outside today. Noticing that the local small airport does pilot training. Small plane currently doing loops and twists over house

Tue Jul 14 3:30 PM

**@cfwhisperer** On that very topic, I was just reading the docs on Offline AIR Application Support for ColdFusion 9: <http://bit.ly/12ucLG>

Tue Jul 14 3:16 PM

**@scouten** Been there. Installed/tested TurboLinux Japanese version once. Ordering the product was hard enough. Japanese coworker helped

Tue Jul 14 1:13 PM

RT **@ryanstewart**: Fantastic article on channels and endpoints for Flex and Data Services - <http://bit.ly/1EjCR5>

Tue Jul 14 12:39 PM

OMG. I just discovered that my Mac wireless connection still gets 4 bars all the out by the pool. **#workingfromhome**

Tue Jul 14 11:58 AM

**@brandonpurcell** Yeah, just noticed that cf tag hinting is working in cfc after closing /cffunction, but not inside the function.

Tue Jul 14 11:23 AM

Perfect now that ColdFusion 9 has it built-in! RT **@kasthomas**: Job ads that mention Lucene are on the rise -- sharply <http://3.ly/mxV>

Tue Jul 14 11:15 AM

**@commadelimited @cfjedimaster** Could that be HornyKlitten4839 I keep blocking maybe?

Tue Jul 14 10:54 AM

**@tpryan** Thanks Terry.... **@bigmadkev** and **@cfjedimaster** helped me find that too #

Tue Jul 14 10:51 AM

Good comment/question on <http://bit.ly/2r00jh> : How does ColdFusion ORM handle conflict resolution for concurrent read/write?

Tue Jul 14 10:33 AM

**@marcesher** Yikes! That's about as long a list as the Flex Namespace bug report 17854. **#BeCarefulWhatYouWishForYouMightJustGetIt**

Tue Jul 14 10:24 AM

**@marcesher** There shouldn't have to be a plug-in for word wrap, or any basic IDE behavior, IMO. It should just be there already.

Tue Jul 14 10:18 AM

My head is full of keyboard shortcuts for Lightroom and Photoshop. How long before I try using Shift Tab or CtrlShftAltE in CFBuilder?

Tue Jul 14 10:24 AM

**@marcesher** There shouldn't have to be a plug-in for word wrap, or any basic IDE behavior, IMO. It should just be there already.

Tue Jul 14 10:18 AM

My head is full of keyboard shortcuts for Lightroom and Photoshop. How long before I try using Shift Tab or CtrlShftAltE in CFBuilder?

Tue Jul 14 10:14 AM

**@cfjedimaster** Thanks for the URL! That's not intuitive at all. URL diff is bugreport vs cbugreport

Tue Jul 14 10:10 AM

So how do I open a ColdFusion Builder bug? The only options in public bugbase are CF9, CF9J, CF801J

Tue Jul 14 9:38 AM

The tabbed browsing in ColdFusion Builder makes me feel all warm and fuzzy bc it reminds me of my security blanket Homesite.

Tue Jul 14 2:07 AM

**@bigmadkev** Just doing a bit of LCDS / ColdFusion 9 testing. Was shooting for manually integrated, which requires 2.6.1.

Tue Jul 14 1:53 AM

**@bigmadkev** Thanks for the tip. Will give it a go. Fall back is to install LCDS on Windows then connect via RMI from ColdFusion 9 on Mac

Tue Jul 14 1:48 AM

Well, LCDS 2.6.1 isn't available for Mac, so that's that for tonight.

Tue Jul 14 1:26 AM

**@demirkapi** Sheesh. I'm out of the loop.

Tue Jul 14 1:23 AM

**@demirkapi** I think you're mixing your acronyms, RTFM and RTMP ;-)

Tue Jul 14 1:20 AM

I'm considering whether I should start LCDS testing with CF9 tonight while keeping an eye on my semi-sleeping son, or wait till work t'morrow

Tue Jul 14 1:18 AM

**@demirkapi** Just a thought, re: JBoss. So you have CF9 deployed on Tomcat on SnowLeopard, minus some advanced features like LCDS, Solr?

Tue Jul 14 1:15 AM

**@seancorfield** Oh. Now I get it. :-)

Tue Jul 14 1:14 AM

**@demirkapi** Instead of just Tomcat, how about full JBoss for full functionality (as defined by the docs)

Tue Jul 14 1:12 AM

**@seancorfield** ... in which case `www/Application.cfc` and `www/foo/Application.cfc` in the webroot, going up till the webroot

Tue Jul 14 1:11 AM

**@seancorfield** To me, "till the webroot" means up the tree till `www/`, which overlaps with "in the webroot".

Tue Jul 14 1:04 AM

**@demirkapi** Run VMWare or VirtualBox with Linux just for CF9 testing. Must be a lot of trouble to wipe Mac and reinstall apps

Tue Jul 14 1:00 AM

**@demirkapi** You must be kidding. Why can't you just wipe CF9 and try again?

Tue Jul 14 12:10 AM

ColdFusion Engineering in Bangalore just starting to roll in... Fresh CF Bugs just now by Hemant, Praveen

Tue Jul 14 12:08 AM

I still don't get `Application.cfc/cfm` lookup order "You can set ColdFusion 9 to search till the web root, in the web root"

Mon Jul 13 1:40 PM

I noticed that Mike Nimer's ColdFusion log viewer for Eclipse is no longer available. <http://bit.ly/1bxAPr>

Mon Jul 13 1:33 PM

RT **@NASA**: If you want to watch the shuttle launch from your iPhone or iPod touch, check out <http://iphone.akamai.com> . **#NASA**

Mon Jul 13 1:11 PM

RT **@styggiti**: Heard about the new Virtual File System in **#ColdFusion** 9? Now you have: <http://snurl.com/n5c97>

Mon Jul 13 1:02 PM

**@guyrish** Beginner to Intermediate. I'm looking for an underexposed or misunderstood area. Not sure what might be useful to audience.

Mon Jul 13 12:51 PM

**@tfitch** After years of bliss using the perfectly functioning ColdFusion bugtracker (internal), I hated JIRA's overengineering /complexity

Mon Jul 13 12:15 PM

Brainstorming good topic to speak abt for RIA Unleashed (Boston, Nov 13, 2009). Ideas? Strengths are **#coldfusion #linux #flex #lcds**

Mon Jul 13 12:05 PM

RT **@cfjedimaster**: 200+ folks in the Online CF Meetup preso. awesome!

<http://www.meetup.com/coldfusionmeetup/about/>

Mon Jul 13 11:49 AM

[@JoshuaCurtiss](#) right. Its Flash based

Mon Jul 13 11:16 AM

New in ColdFusion 9 Admin: "Disable retrieval of autogenerated keys "

Mon Jul 13 11:09 AM

[@cfjedimaster](#) I thought the protocol is to just tweet you :-)

Mon Jul 13 11:06 AM

[@cfjedimaster](#) cfbugs display order not exactly sorted on bug id. Ray's new bug 78709 shows up second, under 78705, above 78708 and 78706

Mon Jul 13 10:33 AM

[@cfjedimaster](#) Holy crap you got thin. Nuthin bug skin and bones (and glasses)

Mon Jul 13 10:25 AM

Beware of Search field in cfbugs. Does not trim criteria and is literal without boolean search operators. At least its case-insensitive

Mon Jul 13 10:20 AM

[@sjespers](#) Be warned, don't eat lunch in the Adobe Bangalore building's cafeteria. Head to the Forum Mall.

Mon Jul 13 10:11 AM

<http://cfbugs.adobe.com/> is not a shortcut to actual cf bugtracker
