Related Categories: Adobe, Mac OS X, ColdFusion, Video, Macromedia

Receive real time notifications for updates on the blog aggregator ColdFusionBloggers.org with Adobe Wave. Just navigate to the ColdFusionBloggers website and click the badge in the lower right for **Get alerts with Adobe Wave**. Built on Adobe AIR, you can now use **Adobe Wave** as a single application to receive all your notifications in one place. Adobe Wave runs as a desktop application that sits in a corner of your screen.

The ColdFusion Bloggers website is created and maintained by the ubiquitous, prolific, and super nice guy **Ray Camden**, ColdFusion Jedi Master. Ray was among the very first to utilize Adobe Wave for the benefit of the ColdFusion community of developers.
