Rick Root notified the CFTalk list today that his free web based file manager and manipulation wizard is now available in beta (0.95b) from <http://www.webworkslc.com/cffm> . The wizard allows multiple concurrent file uploads, and image manipulation such as resizing, rotating, and scaling. There is also a demo online to try for yourself.

I've recently been interested in finding a good solution for image uploading and manipulation. Other solutions for CFMX that I've found include:

- **ColdFusion component: tmt\_img 2.0** (free)
- **Alagad Image Component** (\$50)
