

## ColdFusion 8.01 64-bit and Supported Linux Distros

Posted At : May 5, 2008 10:22 AM | Posted By : Steven Erat

The ColdFusion 8.01 System Requirements as shown in the [detailed platform support matrix](#) [PDF] indicates that support for 64-bit Linux distributions is limited to Red Hat Enterprise Linux 5 and SuSe Linux Enterprise Server 10.1. This fine print appears to often go overlooked, so I just want to broadcast it a little louder here.

I was contacted today by someone reporting installation problems and mentioned glibc and floating point errors. A bit of Googling turned up this [Google Group thread](#) and [this blog entry](#). Apparently, glibc 2.5 is required for the 64-bit binaries used in the ColdFusion 8.01 64-bit server, so RHEL4's glibc 2.4 just won't do.

On a related note, the ColdFusion [Installation Support](#) page currently has a broken link to receive free installation support by email. I notified the web team about the broken link, and I found that the new way to enter this type of installation support request is by registering your product and [completing a form here](#).
