The ColdFusion 8 flood gates have opened wide in the blogosphere, and ColdFusion developers everywhere have begun to consider and experiment with the wide range of great new features. As you know, Adobe Labs is hosting the **ColdFusion 8 Public Beta**, so if you haven't downloaded and installed it yet, now's the time.

Surely you'll have some questions about features and functionality as you play with the Server Monitor, Flex / LiveCycle DataServices Integration, Ajax integration, PDF documents and forms, Image processing, database driver enhancements, performance improvements, and all the other **new features**. Be certain to read the **Installation Instructions** and the **Release Notes** for known issues. Adobe Labs has set up a **ColdFusion 8 Forum** where you can begin discussion of your development ideas and experiences.

Questions are welcome, and remember that, for now, this is a public beta, so your input is wanted to help shape the final release. If you feel confident that you've uncovered a bug or have an urgent enhancement request then you can **enter a report here**. All reports are read and evaluated on technical merit and distribution of impact (i.e. how many developers or sites may experience the reported problem).

I'm thrilled that I've been able to contribute to the development and quality assurance testing for this upcoming final release of ColdFusion 8, and I'm completely certain you will be too.

But work is not done yet, so get **ColdFusion 8 Public Beta** and provide your feedback.
