This past week I put my blogging on hold while I worked furiously on my presentation "Running Blackstone on Unix and Linux". This is was an internal presentation that I gave today within the company.

I'll revise it after Blackstone release, and then I'll make a Breeze presentation of the talk, available publically, so I'll be sure to blog it when that time arrives.

Currently, the presentation covers just about everything unique about using ColdFusion MX on Unix or Linux, with special focus on differences in Blackstone. It also covers history of CF on *nix, known issues, finding system information, debugging tips, and Linux IDEs available for developing ColdFusion.

Hey, maybe I'll even bring it to my local CFUG to get Ron off my back ;-)
